

re faa noise- dkt 2120-a137  
doc 04 21298

faa tries to mask the noise they make by concocting ridiculous ways to measure. currently instead of measuring actual noise, they have manipulated some kind of 24 hour average, as if our ears hear noise that way and as if that matters when a plane wakes us from health inducing sleep. faa has been taken over by aviation profiteers and cares about the much larger general public not at all. it cares not at all about the unhealthy air resulting from airplane use, it cares not at all about the noise pollution that is ruining american life and health, it cares not at all about the danger posed by terrorists and lets them on planes and into airports.

FAA is a farce and does not help the general american public one little bit. it goes after helping the guys with money - the aviation industry and the rich guys who can afford private planes. it regards the general american public as something it can squelch. there is no democratic process in this agency at all.
